Let's repeat the same process. This time you create a block showing the most recent items added to the Website content type. Here's the plan for this view:

1. Display: Block
2. Format: HTML list showing five titles
3. Fields: Title
4. Filter: Sites content type
5. Sort: Newest first

Here are the steps we'll use to create that view:

1
- Go to "Structure", "Views", and then "Add view".
- View name: **New Websites**
- Description: **a block to show the latest websites**
- Show **Content** of type **Website**.

2
- Check "Create a block".
- Display format: **HTML list**
- Click "Save and edit".

Now you can place the block, just as we placed the New Users Group block.

3
- Go to "Structure" and then "Block layout".
- Place the "New Websites" block in the Secondary region.
- Click the down arrow in the "Recent content" row and click "Disable". We'll do this because the sidebar is getting busy, and also because our new views are making the Recent content block redundant.
